AVALTA

PREFACE

On March 31, 1949, Newfoundland formally entered Confederation as Canada's tenth province. The Dominion Bureau of Statistics immediately proceeded to extend its services to Newfoundland. As an early step in this extension it seems desirable to assemble important available Newfoundland statistics to serve as a background for the more extensive compilations which are to be undertaken by the Bureau. The material here presented varies in comprehensiveness in the different fields and is not always strictly comparable with data for the other provinces. The scarcity of statistical data has been commented on as a special difficulty attending the negotiations leading to Newfoundland's entry into Confederation.

The tables of this bulletin are presented primarily as a source of reference material for writers, statisticians and others desiring summarized information concerning the new province and its people. It is hoped that the information contained in this bulletin will fill the need for statistics on Newfoundland until series fully comparable with the other provinces can be published.

Herbest Marshell

Dominion Statistician.

MAP OF

ISLAND OF NEWFOUNDLAND

INSET: COAST OF LABRADOR

SECTION 1. - GEOGRAPHY AND CLIMATE

The triangular-shaped Island of Newfoundland, situated between the parallels 46° 35' and 51° 39' N. and the meridians 52° 36' and 59° 25' W., virtually spans the mouth of the Gulf of St. Lawrence. In the north it is separated from the mainland by the Strait of Belle Isle, about 11 miles wide at its narrowest point. In the south west it is separated from Cape Breton Island by Cabot Strait which is about 60 miles wide at its narrowest point. The Island is the most easterly part of North America. The port of St. John's is about 1,900 miles from Liverpool, while the air line distance between Gander Airport and London, England, is 2,360 miles.

Geologically, the Island of Newfoundland is an integral part of North America. It consists of the unsubmerged highlands of a now foundered extension of the Appalachian mountain system; the lowlands form part of the banks of the North Atlantic which lie off Newfoundland. The shore line is rugged and the deep indentation of numerous bays and headlands creates a coastline some 6,000 miles in extent. The greatest elevation is along the western border where the Long Range Mountains rise to elevations of over 2,000 feet. From this, the general level of the land slopes towards the Avalon Peninsula which has an elevation of about 700 feet. The interior of the Island is undulating, low hills alternating with rolling plains, marshy tracts and wooded areas interspersed with numerous lakes and rivers. Productive forest is found on the better-drained valley slopes and is, normally, mixed softwoods and hardwoods with balsam fir, white spruce, and birch predominating. Many of the lakes are bordered by tracts of agricultural land but the amount of arable land is limited.

The climate is typically maritime, extremes of temperature being moderated considerably by the influence of the surrounding ocean. The oceanic influence is modified, however, by the cold Labrador Current and by the Island's situation to the east of the continental land mass. Precipitation is abundant and well distributed throughout the year.

In addition to the Island, with an area of 42,734 square miles, the Province of Newfoundland comprises some 112,000 square miles of the Coast of Labrador, its claim to this area having been confirmed by the decision of the Judicial Committee of the Privy Council in 1927.

Newfoundland ranks seventh among the provinces in area. It is about one-quarter the size of Canada's largest province, Quebec (594,860 sq. miles) and is more than three times the combined area of Prince Edward Island (2,184 sq. miles), Nova Scotia (21,068 sq. miles), and New Brunswick (27,985 sq. miles). The Island of Newfoundland is about 83 p.c. of the combined area of the three Maritime Provinces.

⁽¹⁾ Day-degrees represent the difference in temperature between the mean temperature of the air and the temperature of 65°F, multiplied by the number of days during which the outside temperature was lower than that figure. Fuel consumption for heating purposes will be proportionate to these totals.

SECTION 2. - POPULATION

The population of Newfoundland in 1945 was 321,819, mostly the descendants of settlers from southern England and Ireland. More than 98 p.c. of the population is native born.

The population is unevenly distributed, nearly one-half living on the Avalon Peninsula in the eastern part of the Island. St. John's, the capital and Newfoundland's only city, is a trading and commercial centre of about 45,000 persons within the municipality, or 57,000 persons in greater St. John's. Apart from St. John's, there are 25 places having a population in excess of 1,000, principal amongst these being Bell Island and Carbonear on the Avalon Peninsula, Grand Falls, Windsor, Botwood and Bishop's Falls in the interior and Corner Brook on the west coast. The remainder of the population is distributed among more than 1,300 small settlements spread over 6,000 miles of coastline.

The three main religious denominations are Roman Catholic (33 p.c.), Church of England (31 p.c.) and United Church (25 p.c.). Of the smaller denominations the Salvation Army has the largest number of adherents (7 p.c.), followed by Pentecostal (2 p.c.).

During the past half century there has been considerable migration to Canada and the United States. Canada's 1941 Census lists 25,837 residents and the United States Census of 1940 lists 21,361 residents as Newfoundland born.

- (1) Refers to Bell Island as a whole, and includes such settlements as Lance Cove, Freshwater and West Mines.
- (2) The population shown for St. John's City represents the number living within the incorporated limits of the city. Figures sometimes given for St. John's include a one-mile strip outside the legal boundaries which, although not actually part of the city, has lately been included for such purposes as town planning, etc. This area includes parts of the following census sections: Boggy Hall, Freshwater Valley, Kilbride, Major's Path, Nagle's Hill, Quidi Vidi, and Southside. The population of St. John's, including all of these sections, amounted to 57,496 in 1945. Some of the sections extend beyond the one-mile fringe but it is not possible to show the population for the parts strictly within this limit.
- (3) Formerly called Grand Falls Station.

SECTION 3. - VITAL STATISTICS

Births. - Newfoundland's birth rate is one of the highest among the white peoples of the world. During the two decades before the war the rate remained remarkably constant, varying from 23 to 28 births per 1,000 population. Even during the depression years of the 1930's, there was an average rate of over 24 as compared with about 21 for Canada. Due, in all probability, to the social and economic conditions of the war years, the rate increased sharply to a record rate of 36.3 in 1946. In general, the Newfoundland birth rates during the past 20 years are roughly comparable to those of Quebec and New Brunswick.

Deaths. - Newfoundland's death rate, which has varied between 10 and 14 deaths per 1,000 population during the past 20 years, is slightly higher than the rate for Canada. Infant and maternal death rates have been higher than in Canada. In addition, there has been high mortality from tuberculosis and other pulmonary infections. However, the death rate has declined steadily during the past decade and a half.

Natural Increase. - Up until the late 1930's, the high birth rate was offset by a high death rate, with the result that the natural increase in population averaged about 11 persons per year per 1,000 population, -- somewhat lower than was the case for Canada. The increase in the birth rate and the decline in the death rate during the last decade has given Newfoundland one of the highest rates of natural increase in the world, roughly comparable with the rate in Quebec.

Infant Mortality. - Prior to 1938, an average of 116 children out of every 1,000 born alive died within the first year of life, as compared with 86 in Canada. By 1946 the rate had dropped to 74 as compared with 47 in Canada.

Causes of Death. - Newfoundland has had relatively higher death rates than Canada from tuberculosis, puerperal causes, congenital malformations and diseases peculiar to the first year of life, diarrhoea, senility, and pulmonary infections. However, deaths from cancer, intracranial lesions, diseases of the heart, nephritis, and accidents are, on the whole, lower than in Canada.

Age at Death. - In 1946, over 25 p.c. of the total deaths were of children under one year of age, and almost 40 p.c. of persons over 60 years of age. This compares with 13.4 p.c. and 56.3 p.c., respectively, for Canada. Due in large measure to a high infant mortality rate, almost half of the deaths in 1931 were of persons less than 30 years of age; by 1946, deaths in this group formed less than 43 p.c. of all deaths. The general trend of the past decade is definitely towards a greater life expectancy.

Marriages. - Except for 1944 and 1945, the marriage rate has been, consistently, lower than that for Canada and in only one year exceeded 10 per 1,000 population. As was the case in Canada, there was a rise in marriages during the war years.

SECTION 4. - PUBLIC HEALTH AND WELFARE

Due mainly to economic factors, the standard of health in Newfoundland is generally below that of Canada or the United States, although considerable progress has been made in recent years. The greatest need for improvement in comparison with other countries is seen in the high incidence of tuberculosis and malnutrition, and in the high infant mortality rate.

The death rate for tuberculosis is about three times as high in Newfoundland as in Canada and is one of the chief concerns of health authorities of the Island. Recent formation of a Newfoundland Tuberculosis Association, expansion of sanatorium accommodation, and a vigorous educational program on the value of early X-ray have all contributed to the improvement displayed in the fall of the tuberculosis death rate from 191 per 100,000 in 1939 to 122 in 1946, comparable figures for Canada being 53 and 47.

A nutrition survey was undertaken in 1944 by English, Canadian and United States investigators, at the request of the Newfoundland Government, and the dietary deficiencies discovered, particularly in vitamins and minerals, led to the adoption of such steps as fortification of margarine, reduction or removal of import duties on fruit juices and canned milk, compulsory enrichment of imported flour, increased relief allowances, and distribution of milk to school children. A similar survey made in 1948 reported considerable improvement in the sample areas studied.

The general mortality rate in Newfoundland is somewhat higher than that for Canada, the 1946 figure being 10.4 per 1,000 as compared with Canada's 9.4. The infant mortality rate, however, is much higher, being 74 per 1,000 in 1946 as compared with 47 for Canada. Considerable variations in the rate exist as between different parts of Newfoundland, some districts comparing favourably with the Canadian figure while others, notably Labrador, show a rate in excess of 100. A separate Division of Child Welfare has been set up to deal with the problem.

The administration of most health and welfare measures, including institutional administration, old age pensions, war pensions, allowances to widows, orphans and indigent persons, and public health preventive measures is the responsibility of the Department of Public Health and Welfare. Scales of pensions and allowances fall considerably short of those obtaining for Canada, due to necessary limitations on public expenditure.

Newfoundland and Labrador have 22 government hospitals including an infants' home, a home for the aged and infirm, a tuberculosis sanatorium, an isolation hospital, a mental hospital, a merchant navy hospital, and an orthopaedic hospital. Fourteen of these are cottage hospitals which serve outlying settlements, together with a hospital ship and 6 nursing stations. In addition to these, there are 8 hospitals and 6 nursing stations operated by private companies and associations. In the northern part of the Island and in Labrador the International Grenfell Association plays a leading part in caring for the health and welfare of the people, maintaining several hospitals, schools, orphanages, and handicraft centres. It encourages agricultural activity and operates a small stock farm. Religious organizations render an important service in the maintenance of orphanages, several hospitals and homes for the aged, and delinquents.

Wartime prosperity associated largely with the construction of defence establishments has been reflected strikingly in the decrease in the numbers of persons on able-bodied relief which dwindled to a monthly average of 179 persons

in 1945 from a 1938 average of 38,099. The improved financial position of the Government has permitted a fourfold increase in public health expenditure since 1935.

The Newfoundland Government and the city of St. John's have jointly initiated a large-scale housing programme in the St. John's area, and government grants have been voted to assist several private housing associations.

SECTION 5. - EDUCATION

Educational facilities in Newfoundland were first provided by the various religious denominations and education is still, with few exceptions, based on the denominational system, although today it is largely financed from public funds.

Educational policy is formulated by an Education Council composed of the Commissioner for Home Affairs and Education as Chairman, the Secretary for Education as Vice Chairman, and a representative for each of the major religious denominations. The latter are also executive officers in the Department of Education. Local administration is in the hands of some 225 Boards of five to nine members appointed by the Government.

The children, in the majority of cases, attend schools of their own denomination. The schools are financed by the Government. There is a uniform and common teacher-training programme, a common curriculum, and, with few exceptions, common text books. The system of external examinations is common to all schools and a uniform Government scale regulates the grant allocations to school boards and the minimum salaries paid to teachers. The Education Act provides for the establishment of interdenominational Boards of Education and schools. Some of the largest schools in the country are of this kind and are known as common or amalgamated schools. In 1942, an Act was passed providing for the free and compulsory education of children between the ages of 7 and 14.

Teacher training is provided at Memorial University College, a state and non-sectarian institution. This college also provides for the first two years of the degree course in arts and science, and for three years in engineering.

Great progress has been made in recent years in raising educational standards in Newfoundland, particularly during the war years when improved public finances enabled the Government to make larger contributions. Since 1935, the annual cost of maintaining the educational services has more than quadrupled. The median salary of teachers advanced from \$483 in 1940 to \$920 in 1947.

Second	220	. 30.9	456	37.2	146	19.8	512	32.8
Third	105	14.8	163	13.3	92	12.5	220	14.1
Uncertified	41	5.8	6.9	5.6	110	14.9	222	14.2

Note. - A university grade certificate requires 3 years professional training and 3 years successful experience; the associate grade requires 2 years training and 2 years experience; first grade 1 year of each; second and third grades are older certificates. In Newfoundland, as elsewhere, a shortage of teachers has resulted in the employment of unqualified personnel.

(1) Includes approximately 4,800 pupils age 5. (2) Includes first 3 years, Prince of Wales College. (3) Includes large number of pupils beginning school in the spring. Enrolment is for 1945-46. (4) Taking special courses. An additional 20 pupils are registered in correspondence courses,

52. - Enrolm ent by Ages, Newfoundland and Maritime Provinces, School Year 1946-47

Note. - The percentages based on the number of pupils of age 10 indicates the ages at which pupils are leaving school and gives some idea of the holding power of the schools. In Newfoundland the first heavy loss comes between ages 13 and 14 despite the attendance laws requiring attendance to the end of age 14. A similar situation existed in New Brunswick and some of the other provinces before the introduction of Family Allowances.

57. - Expenditure on Education and Cultural Activities, By and Through Government Departments, Fiscal Year Ending March 31, 1948.

Note. - The distribution of expenditures in this table is in some cases, quite arbitrary. There is unavoidable overlapping in some services such as audio-visual aids and adult education. In addition to these expenditures, Newfoundland spent \$255,830 on the civil re-establishment and vocational education of veterans and \$149,407 on nutrition in schools and child welfare.

SECTION 6. - INDUSTRIES

A - FISHING

Traditionally, the chief means of livelihood of the people of Newfoundland has been the fisheries. Until the end of the 19th century, the Island's economy was based exclusively upon the export of fish and fish products. Since then, following the construction of a railway across the Island and the increased accessibility of forest and mineral resources, considerable economic diversification has taken place and the export value of newsprint now approximates that of the fisheries. Exports of fishery products comprised 43 p.c. of Newfoundland's exports in the fiscal year 1946-47 and 36 p.c. in the fiscal year 1947-48.

The paramount importance of the fishery in Newfoundland's economic life lies in the numbers of the population dependent upon it, some 28 p.c. of all gainfully occupied Newfoundlanders being employed in the fishing industry as compared with 7 p.c. in forestry and 3 p.c. in mining.

Cod, and particularly dried salt cod, which holds first place in the fishing industry, has steadily improved in quality in recent years due in large measure to improved standards of packing and inspection introduced by the Newfoundland Fisheries Board which was set up by the Government in 1936. Competitive selling was replaced by a group marketing procedure under the supervision of the Board, which led to the establishment, in 1947, of the Newfoundland Associated Fish Exporters Limited (NAFEL) which is now the sole selling agency for Newfoundland salt cod. The principal market for salt cod is the West Indies.

Modern refrigeration facilities have in the past ten years, given rise to a growing recognition of the United States and Canada as markets for fresh frozen fish, and currency exchange difficulties have fostered this trend by restricting the markets for salt cod. Other products of the Newfoundland fishing industry are seals, salmon, lobster, halibut, herring and whales. Fish meals and oils are produced in considerable quantity and there is a growing canning industry.

SECTION 6. - INDUSTRIES

B. - FORESTRY

The forests of Newfoundland, comprising some 17,000 square miles, or about 46 p.c. of the land area (excluding Labrador), are one of her most important resources, supporting an industry which enjoys second place (after fisheries) in the economy. It is estimated that about 17 p.c. of the forested area, however, is not of present marketable value, due to inaccessibility and the unsuitability of some stands.

Woods operations and forest products manufactures give employment to about 12 p.c. of all gainfully occupied males, and exports of forestry products account for about 40 p.c. of Newfoundland's total, surpassing, in the fiscal year 1947-48, the export value of fishery products. The chief markets are the United States and the United Kingdom.

Pulp and paper (newsprint) is Newfoundland's most important forest industry. Large areas of forest are held on long-term lease by two pulp and paper companies which operate mills, one at Grand Falls and one at Corner Brook. These two towns have, as a consequence, developed into thriving communities supporting satellite industries.

Some 2,000 square miles of forest area is taken up by small operators of nearly 900 sawmills which produce lumber chiefly for local use. The Government has reserved a three-mile strip as a source of fuel and lumber for the inhabitants of the fishing settlements. Much of the coast is bare and rocky and there has been considerable depletion of this forest.

SECTION 6. - INDUSTRIES

C - MINING

Mining ranks third (after fishery and forestry products) among Newfoundland's basic industries. The value of mineral production in 1948 reached an all-time high of \$20,000,000 as compared with the previous record of \$15,711,000 established in 1947. This industry provides a living for some 4,000 workers whose wages and salaries in 1948 amounted to \$7,253,000. Except for a small amount of limestone, all minerals produced are exported and accounted, in the year 1948, for 20 p.c. of total exports.

The chief minerals are iron ore at Bell Island on the east coast and lead, copper, and zinc concentrates at Buchans in the interior. The Bell Island deposits are of good quality but relatively costly as a source of high grade steel, due to phosphorus content. Buchans' operations have been carried on since 1927 and have contributed materially to the industrial growth of that part of the Island.

Fluorspar, which is used as a flux in the manufacture of steel and aluminum, is produced at St. Lawrence on the Burin Peninsula, and a large limestone deposit is located at Aguathuna, on the west coast. The principal market for both these minerals, as well as for the iron ore produced at Bell Island, is the steel mill at Sydney, Nova Scotia, whilst practically all lead, copper, and zinc concentrates are exported to the United States.

Recent discoveries of large additional deposits of concentrates in the Buchans area, and of a very extensive body of iron ore in Quebec boundary region of Labrador, indicate that the mining industry will continue to play an important part in the Island's economy.

SECTION 6. - INDUSTRIES

D. - AGRICULTURE

Agriculture plays a relatively minor part in Newfoundland's economy, rating fourth place (after fisheries, forestry, and mining) among the Island's basic industries. The climate is not well suited to the production of any but the hardier crops, and the amount of arable soil and pasture land is limited. Most food is imported, comprising about a third of the Island's total imports annually. Two-thirds of the food imports are from Canada and most of the remainder from the United States.

In the past fifteen years, an active policy of encouragement of agriculture has been carried on making use of field advisors, soil surveys and subsidization of livestock improvement. A laboratory and a demonstration farm are maintained in the St. John's area and a personnel training scheme for general and fur farming has been introduced.

About a third of the Island's improved acreage, including pasture, is to be found on the west coast, the southern part of which is better suited than any other region for agriculture. The largest and steadiest market, however, is the St. John's area on the east coast, which supports a neighbouring farming community of some size, mostly of small holdings.

In the rest of the Island, cultivation is mainly on a part-time family-plot basis by fishermen and loggers. The 1945 Census of Newfoundland discloses that only 8 p.c. of persons cultivating the land were full-time farmers, the remainder being fishermen and others.

SECTION 7. - LABOUR

The distinctive features of Newfoundland's economy are reflected in the characteristics of the gainfully occupied. As was shown in the previous Section, the economy rests primarily upon three industries, fishing, pulp and paper, and mining, based on its main resources. Extensive agricultural development has not been possible because of the generally unfavourable soil and climatic conditions. Industrialization has been limited by the restricted nature of the home market. The production of its basic industries, which is far in excess of domestic requirements, is geared to the demand in export markets.

The 1945 Census showed that 35 p.c. of the total population were gainfully occupied, and that over 41 p.c. of the gainfully occupied were engaged in the primary industries - fishing, forestry and logging, mining, and agriculture, with fishing (28 p.c.) far in the lead. Over 9 p.c. were engaged in manufacturing, with a large proportion of these in the pulp and paper mills.

Most workers in the primary producing industries are located in the central and western coastal regions of the Island, while St. John's, being mainly a trading and commercial centre, has relatively larger numbers in clerical, commercial and service occupations. Wage rates are generally lower than in Canada for comparable trades.

With such large numbers of the population dependent on the fishing industry, it is apparent that any fall in the demand for fish has great repercussions on the country. A very high rate of unemployment persisted throughout the 1930's, mainly due to the poor demand and low prices for fish exports. Statistics of the numbers receiving Government assistance show that, prior to the outbreak of the war, as high as one-sixth of the total population was, at times, on relief.

The wartime stimulus to Newfoundland's basic industries, particularly the renewed demand and high prices for fish, the enlistment of a large proportion of Newfoundlanders of military age, and the construction of large defence bases by the United Kingdom, Canada, and the United States, resulted in a high level of prosperity during the war years. Production and trade expanded greatly, employment reached an all-time high, and income per worker exceeded all previous levels.

These conditions continued in the post-war period. During the past year, however, there have been indications of less favourable economic conditions in some areas. These include a lower fish catch in 1948, the cessation of work on various construction projects and some slackening of activity due in part to uncertainties associated with the impending confederation with Canada.

83. -Gainfully Occupied 14 Years of Age and Over, by Industry Groups and Sex, 1945

Note. - Occupational versus Industrial Classification - The group titles are similar but the composition of the groups is different. The groups manufacturing, construction, transportation, etc. in the industry tables include all persons employed in these industries, irrespective of the nature of their occupations. The groups manufacturing, construction, etc. in the occupations include only those following manufacturing, construction, etc. trades regardless of the industries in which employed.

SECTION 8. - TRANSPORTATION AND COMMUNICATIONS

Railway and Shipping. - In the centuries while Newfoundland remained a fishing colony, the sea provided a natural highway and the only means of transportation for the inhabitants living in settlements along the coast. Towards the end of the 19th century, however, the exploitation of other resources in the interior began to assume greater importance. The construction of a trans-insular railway by a private company was begun in 1881 and completed in 1896. In 1923, being in financial difficulties, the railway was taken over by the Government.

The railway connects St. John's with various parts of the Island. The main line runs from St. John's to Port-aux-Basques and there are four branch lines, three of which are operating. In addition, there are several company-operated spur lines. The total railway mileage is approximately 700. The railway operates, in addition, several steamships which are used in coastal services carrying mail, treight, and passengers between points in the Island, as well as in Labrador. Service is also maintained between Port-aux-Basques and North Sydney and between Corner Brook and North Sydney.

Climatic conditions and the nature of the terrain create special difficulties for railway operation in Newfoundland; the provision of rail and steamship services for the widely scattered settlements is costly and deficits have been common. During several of the war years there were substantial surpluses but these were more than offset by capital outlays.

Canadian steamship companies maintain freight and passenger services between various Canadian points and St. John's. A number of small locally-owned vessels engage in the carrying trade along the coast and also between Newfoundland and points on the mainland. The regular steamship services between Newfoundland and the British Isles have usually been combined with services between the British Isles and Canadian or Canadian and United States ports. With the exception of St. John's and ports along the southern coast, shipping closes for several months in the winter.

The principal harbours in Newfoundland are administered by three Harbour Commissions and seven Harbour Boards, and by Pilotage Commissions, all responsible to the Government. The Newfoundland Drydock at St. John's is owned by the Newfoundland Railway.

Roads. - Newfoundland has some 2,000 miles of motorable roads, nearly one-half of which are in the Avalon Peninsula. Approximately 100 miles are paved, the rest, gravel surfaced. There are, in addition, some 3,000 miles of local roads within or around the settlements.

Road construction policy has aimed primarily at connecting the more isolated districts with St. John's or the nearest large settlements. Various sections constructed to serve local needs, however, will eventually be linked up to form a transinsular highway running from St. John's to Port-aux-Basques (approximately 625 miles).

The expenditure provided for roads and bridges in the 1948-49 estimates was \$3,395,000. Of this amount \$1,100,000 was for maintenance of roads and bridges and \$1,120,000 for construction of new roads.

Civil Air Transportation. - Newfoundland occupies a unique position in respect as trans-Atlantic aviation, being the most easterly part of North America and on the great circle route between the most densely populated areas of North America and Western Europe. Gander Airport, constructed originally by the British Air Ministry in the late 1930's, is one of the largest airports in the world.

As a result of World War II, Newfoundland's facilities for aviation were greatly improved. Both Canada and the United States were given the right to construct air bases and to establish extensive wire, radio communication, and weather services. These facilities were for defence purposes, and only such rights of civil use as were incidental to the prosecution of the war were granted. After the war, certain of the bases were restransferred to Newfoundland and civil use of the various airlields was put on a more permanent basis by means of various agreements.

The principal air fields in Newfoundland are Gander, and Goose Bay in Labrador. Two air fields built by the United States Government are located at Stephenville and Argentia. Torkay is the eastern terminus of Trans-Canada Air Lines. Burhans is near the mining development of the same name and Botwood is a seaplane base in the mid-north.

Canada has provided the meteorological service in Newfoundland for civil aviation. Existing United States services are linked with the system.

Posts and Telegraphs. - The postal service and domestic telegraph service in Newfoundland are of erated by the Department of Posts and Telegraphs. In addition, some local telephone services are provided as incidentals in certain outlying districts.

There are some 550 regular post offices in Newfoundland, including 33 in Labrador. Of these, 170 in the Island and 2 in Labrador are also telegraph offices. There are some 13 seasonal offices established yearly in transient fishing settlements. In addition, there are several courier routes, aggregating more than 160,000 miles in the Island and more than 7,000 miles in Labrador.

The topography of the country, the lack of roads in many areas, and the small and scattered settlements along some 6,000 miles of coast militate against a trequent postal service for much of Newfoundland and make for high costs. The rates are slightly higher than in Canada and the United States. Direct airmail services between Newfoundland and Canada, the United States, the United Kingdom, and several other countries are now in operation.

As regards telegraph services, the Department maintains a trunk wire circuit along the railway, and more remote settlements are served by wireless from distribution points on the wired system. Many of the post offices are also telegraph offices. Modernization of this system is under way. The use of teletype circuits has been tested and extended recently and linked with telephone circuits in certain areas.

Newfoundland has played an historic part in the development of speedy communication between Europe and North America. The first trans-Atlantic cable was laid to Newfoundland in 1866. The oldest now operating, from Heart's Content, dates back to 1873. At the present time, Newfoundland is the landing place for 14 trans-Atlantic cables operated by four commercial companies. There are 9 submarine cables between Newfoundland and the mainland.

Broadcasting in Newfoundland has been under the control of the Newfoundland Broadcasting Corporation, a government corporation established in 1939. The Corporation operated three radio stations, one in St. John's, one in Corner Brook, and one at Gander, whilst a fourth is under construction at Grand Falls. An independent system, the Colonial Broadcasting system operates a radio station at St. John's. Two broadcasting stations in St. John's are owned by churches. The R.C.A.F. owns a station at Goose Bay, Labrador. According to the terms of Confederation, broadcasting in Newfoundland came under the control of the Canadian Broadcasting Corporation on April 1, 1949.

The radio is of particular importance in view of the isolation of the people in many of the settlements. Radio licences purchased in Newfoundland from Jan. 1 - Nov. 30, 1948, numbered 33,140, as compared with 25,253 in the corresponding period of 1947 and 9,887 in 1937.

SECTION 9. - FOREIGN TRADE

On a per capita basis, Newfoundland's foreign trade is higher than that of practically any other country in the world, and has more than trebled in the past ten years. Since 1941, the balance of visible trade has been unfavourable, but Government surplus revenues in the same period indicate that this has been more than offset by invisible exports chiefly in the form of local services purchased by foreign capital for the construction and maintenance of military establishments.

Chief exports are fishery, forestry and mining products which together account for more than 95 p.c. of the Island's total exports. Principal markets are the United States, the United Kingdom and Canada. These three countries buy nearly two-thirds of Newfoundland's produce, the remaining third, which is mostly salt codfish, being exported chiefly to the West Indies, Spain, Portugal, Italy and Greece.

Practically all Newfoundland's domestic requirements are imported and in the fiscal year 1947-48 amounted to \$105 million of which foodstuffs comprised 32 p.c., textiles and clothing 11 p.c., metallic manufactures, machinery and vehicles 25 p.c., and fuel and petroleum products 13 p.c. Over 95 p.c. of imports are supplied by Canada, the United States and the United Kingdom. In the year 1947-48, 52 p.c. of the total imports were from Canada and 38 p.c. from the United States.

SECTION 10. - PRICES

The wartime and post—war rise in prices in Newfoundland has been greater than in Canada. The available information shows that the cost of living in October, 1948, in St. John's, was 85 p.c. higher than in October, 1938. In Canada, living costs were 57 p.c. higher in October, 1948 than at the same date in 1938. Index numbers of the cost of living in St. John's and Canada since October, 1938, are shown in Table 102. The rise in the average retail prices of specified commodities in St. John's since 1938 is shown in Table 103. To provide a more direct comparison of current Newfoundland and Canadian prices, the average retail prices of a selected list of foods in St. John's and Halifax are shown in Table 104.

102. - Cost of Living Index Numbers (1) - St. John's Newfoundland and Canada, October 1938 - February, 1949

(October 1938=100)

Note. - The Canada cost-of-living index has been changed to an October, 1938 base for comparative purposes. This is a simple mechanical operation using published figures on the base 1935-1939=100. A similar series for Halifax, Nova Scotia, is available back to August, 1939, which is the base period month for these figures. This index was 102.9 for October, 1939 and 152.1 for January, 1949. The St. John's series covers approximately the same range of commodities and rents as the Canadian series but has a less complete coverage of service rates. Differences in construction methods are also fairly considerable.

Sources: Department of Supply, Newfoundland and Dominion Bureau of Statistics.

SECTION 11. - NATIONAL INCOME AND PUBLIC FINANCE

NATIONAL INCOME

Statistical data for Newfoundland are not complete enough to permit estimates of national income and gross national product in the detail published for Canada. However, available information makes it possible to prepare tentative estimates of aggregate national income. The value of exports and imports classified by commodity groups is known. These statistics are particularly valuable because foreign trade is so important in the Newfoundland economy. In addition, some information is available from the 1935 and 1945 Censuses. Government revenues and expenditures are shown in Newfoundland's Public Accounts. Miscellaneous information collected from time to time for administrative purposes by various government boards and commissions also sheds some light on the problem as does the data relating to expenditure on war installations in Newfoundland by Canada and the United States.

Two independent estimates have been made of net national income at factor cost for the year 1945, utilizing the above-mentioned sources, and the total by each method approximates \$110 million. Income was somewhat lower in 1947, following the decline in military spending in Newfoundland by the United States and Canadian Governments. Preliminary estimates show national income of \$120 million in 1948, the last year prior to union with Canada. Because of the scarcity of statistical data the estimates given below should be regarded as tentative. They will be revised if further information becomes available.

Since changes in national income reflect price changes as well as changes in real production, reference should be made to the preceding section to assess the importance of the price factor in the estimates shown below. Pre-war national income of Newfoundland (1936-39 average) has been estimated at approximately \$45 million. (See "Newfoundland, Economic, Diplomatic and Strategic Studies", Appendix B). It should be noted that while the estimates below are stated in dollars, the purchasing power of the dollar was considerably less in Newfoundland than in Canada during the comparable period. This is partly explained by the dependence of Newfoundland on imported goods subject to relatively high custom duties.

PUBLIC FINANCE

Government financing on the national level in Newfoundland was associated with a series of budgetary deficits up to the fiscal year 1940-41 when the wartime stimulus of defence base construction caused an upswing in government revenues which has continued up to the present. Revenue for 1947-48 was \$40.6 million, or more than three times the figure for 1939-40. Expenditures increased to a lesser degree, the net result being a series of seven years of surpluses amounting in all to \$25.2 million. Customs import duties have comprised a growing proportion (about 55 p.c.) of total revenue, despite substantial reductions in import duty rates. Income and excess profits taxes make up about 28 p.c. of the total revenue.

The successive surpluses have enabled the government to reduce the public debt considerably, with a consequent saving on current expenditure for debt service, to expand health and welfare services, and to vote larger sums for road and wharf construction and maintenance, despite greatly increased costs of other essential services. Public health and welfare expenditure increased by 88 p.c. from 1943-44 to 1947-48, public works expenditure increased by 146 p.c., and education by 55 p.c.

Apart from the capital city of St. John's, there were, in 1948, fourteen local incorporated municipalities in the Island. There are no incorporated "rural areas" in Newfoundland corresponding to this type of local government in the other provinces of Canada. In certain cases, however, where several communities are contiguous or are too small to support a local government, they have amalgamated and are incorporated as "rural districts". The national government maintains liaison with local governments through the Local Government Division of the Department of Public Health and Welfare, and all municipal accounts are audited by the national Auditor General.

It is not possible to present complete information in each of the following tables for a consistent series of years. However, the information given covers the broader aspects of public finance and gives a general idea of Newfoundland's financial situation during the post-war years leading up to confederation with Canada.
